

EVAN LO JEN ZHEN

Computer Science Student, Software Development & Applied AI

Kuala Lumpur, Malaysia | +60-1156229896 | evan.lojenzhen@gmail.com | [linkedin.com/in/evan-lo-jen-zhen](https://www.linkedin.com/in/evan-lo-jen-zhen) | github.com/evan-2005 | evan-2005.github.io/Evans-Portfolio

Available for internship (min. 3 months): 1 February to 30 April 2027

PROFESSIONAL SUMMARY

Computer Science undergraduate (Sunway University & Lancaster University, CGPA 3.81) with a background spanning robotics, software development, and technical education. Automated reporting workflows and produced technical documentation as a Cybersecurity Intern at LGMS Berhad, and independently built a wide range of projects spanning AI diagnostics, IoT systems, web platforms, and data analytics. Proven leader in student committees and robotics coaching, with strong analytical and problem-solving skills, clear communication, and a proactive interest in learning new tools and technologies quickly.

TECHNICAL SKILLS

- Core Competencies: Leadership, Teamwork, Communication, Problem Solving, Adaptability, Risk Analysis
- Programming & Data: Python, SQL, Scala, PHP, C++, Java, Visual Basic (VBA), HTML, CSS
- Frameworks & Platforms: React, Laravel, Vue.js, AWS, Streamlit, Git
- AI & Automation: Generative AI / Prompt Engineering, RAG Pipelines (ChromaDB), PyTorch / TensorFlow, Process Automation, VBA Report Automation
- Security Tools: Kali Linux, Burp Suite, Nmap, Penetration Testing
- Productivity & Design: Microsoft Word, Excel, PowerPoint, Canva, Google Workspace, CAD
- Languages: English (Fluent), Mandarin (Proficient), Malay (Proficient), French (Basic, DELF A1/A2)

WORK EXPERIENCE

LGMS Berhad

Cybersecurity Intern

Aug 2024 to Jan 2025

- Conducted penetration testing using Burp Suite to identify and exploit vulnerabilities in web and mobile applications.
- Developed custom scripts to detect security flaws in backend systems and client databases.
- Performed on-site physical security and access point assessments to identify misconfigurations.
- Authored technical reports detailing risk levels and remediation steps, using VBA to automate reporting tasks.
- Collaborated with senior analysts to deliver actionable security insights and compliance recommendations.

Research Centre for Human-Machine Collaboration (HUMAC)

Lab Apprentice, Robotics Research

Feb 2026 to Present

- Designed custom 3D enclosures using CAD and 3D printing, with soldering for embedded microcontrollers and sensors.
- Calibrated robotic actuators and sensors to eliminate kinematic drift and optimize hardware-software communication.
- Accelerated prototyping cycles and ensured research equipment readiness.

Robinuo Learning Hub

Admin cum Coach

Aug 2025 to Present

- Coach children in Robotics and Arduino, simplifying complex engineering concepts for young learners.
- Manage administrative paperwork, reporting, and event planning for educational programs.
- Prepare status reports and program summaries in Word and Excel, and design promotional and session slides in Canva and PowerPoint to support marketing and parent communication.
- Streamline hub operations to ensure a seamless learning environment for students.

P3 Robotics

Robotics Teacher

Oct 2023 to May 2025

- Taught Scratch, Python, and sensor integration to foster hands-on learning.
- Monitored student progress and prepared teams for robotics challenges.
- Managed parent communications regarding student development and achievements.

TECHNICAL PROJECTS

LungLens (Python, AWS, PyTorch/TensorFlow)

- Built: AI-driven healthcare diagnostic aid to help practitioners with rapid imaging screening in underserved communities; trained and deployed ML models on AWS, optimizing inference under low-bandwidth constraints.
- Outcome: Delivered a scalable diagnostic solution capable of fast, reliable inference for remote, low-resource healthcare settings.

Pi Vision (Raspberry Pi, Python, OpenCV)

- Built: Wearable assistive device with real-time spatial image processing and object detection, translating visual scene data into low-latency feedback for visually impaired users.
- Outcome: Produced a fully functional assistive prototype that improves spatial awareness and navigation safety.

Dina & Dyno (Python, Streamlit, ChromaDB, Ollama)

- Built: Offline-first RAG chatbot using Streamlit, Ollama LLMs, and ChromaDB vector embeddings, with multi-persona isolation and real-time response streaming.
- Outcome: Delivered a secure, privacy-preserving AI interaction system with persistent contextual memory and no external data leakage.

Travelicks *(Laravel, Vue.js, PHP, MySQL)*

- Built: Full-stack homestay platform integrated with Google Maps API and a community rating system, plus an admin analytics dashboard tracking engagement and booking trends.
- Outcome: Delivered a high-performing, analytics-backed web application; earned an A+ grade in software engineering coursework.

LodgeLogic *(Scala)*

- Data analytics suite applying functional programming to evaluate hotel performance across demand, value, and profitability metrics.

Smart Irrigation System *(Arduino, ESP8266, C/C++, MQTT, Blynk)*

- Fault-tolerant IoT irrigation system that keeps running through network outages via offline automation and TLS-encrypted cloud monitoring.

NutriTrack *(Scala 3, ScalaFX, SQLite)*

- Desktop nutrition analytics app built on strict MVC/DAO architecture with real-time BMI/TDEE trend visualization.

JobHub *(PHP, MySQL)*

- Web-based recruitment platform connecting job seekers and employers through a searchable candidate and listings database.

Algorithm Implementations *(Python)*

- Huffman Coding compression using a custom min-heap, and recursive merge sort via divide-and-conquer.

Cybersecurity Audit & Penetration Testing Lab *(Kali Linux, Burp Suite, Nmap, Bash)*

- End-to-end security audits and vulnerability scans informing secure software design and threat mitigation.

The Worm Game *(Java, Android Studio, XML)*

- Native 2D Android game with custom collision detection and optimized rendering and lifecycle performance.

EDUCATION

Sunway University & Lancaster University

Bachelor of Science in Computer Science
CGPA: 3.81

2025 to 2027

Sunway College Kuala Lumpur

Diploma in Information Technology
CGPA: 3.82 (Distinction)

2023 to 2025

SMK USJ 12

Sijil Pelajaran Malaysia
1A+, 1A, 1A-, 4B+, 1C+, 1E

2018 to 2023

CERTIFICATIONS

- Building with the Claude API (Anthropic)
- AI Fluency Framework & Foundations (Anthropic)
- LFEL1012: Secure AI/ML-Driven Software Development (The Linux Foundation)
- Introduction to IoT and Digital Transformation (Cisco Networking Academy)
- Diplome d'Etudes en Langue Francaise A1 & A2
- Dean's List (Sunway University)
- IBM Bob Hackathon Certificate (IBM & lablab.ai)

EXTRA ACTIVITIES & LEADERSHIP

IMechE Committee, Sunway University

Publicity & Marketing

- Spearheaded digital content creation and marketing strategy, including Canva and PowerPoint collateral, to promote engineering events.
- Coordinated event planning and outreach to drive student engagement and brand awareness.

Hackathons

- Google KitaHack: Built an SPM math diagnostic app using the Gemini API and Firebase for underserved students.
- IBM Bob Hackathon: Developed RepoSense, an AI codebase intelligence tool (certificate awarded by IBM & lablab.ai).
- AMD AI Hackathon: Competed in accelerating machine learning inference using AMD ROCm hardware stacks.
- Offline LLM Hackathon: Deployed local Gemma 3 via Ollama to benchmark offline LLM performance and latency.

Leadership & Athletics

- House Captain and Class Monitor, Sunway: led inter-house events and managed classroom coordination.
- Top scorer, DELF A1/A2 (French), and representative in National Physics/Chemistry Quizzes, SMK USJ 12.
- Competed in District-level volleyball tournaments; won multiple futsal tournaments through team strategy and athletic execution.
